

Sno-Cone Kiosk

Writer: Mark Jones

Another item of interest to add to this scene could be a sno-cone kiosk. Many kiosks are found in an amusement park and we can borrow this idea from past VBS years and reuse items already available to you.

Wrap a cart or small table with the silver water tank wrap used on the diner. Lean a couple of wagon wheels against the table and add a large umbrella (colors of diner if possible).

To make a sno-cone machine, choose a medium size box slightly smaller than a copy paper box. Carefully cut windows on all four sides. Spray paint the box silver inside and outside. It might take a few coats to cover any printing on the box. After the paint is completely dry, add window glass made from scrap pieces of laminating film or acetate from the hobby store. Add pillow batting to the box as snow but do not fill over half way. Place this on the cart and add the motor to the top of the box. It is possible to look around for items that could play the part but if you need to make a motor, cover an oatmeal can with foil and tape that to an upside down foil pan add a couple of soup cans.

Be sure to have cone cups visible. Create the cups by taking bright pink paper and curling it around into a cone and taping in place. Use scissors to cut the paper straight across the top of the cone. Since this is Cotton Candy Diner, consider making this kiosk a place to get cotton candy or locate in another place on a special day to get cotton candy as children leave the VBS.
